Key results:

- LED light sources provide vintage look, elegant and warm lighting suitable for the Baroque style, five-star luxury environment
- The light sources emit light in 360 degrees, and offer the feeling and looks of incandescent bulbs.
- The energy requirements and operating costs of the lighting system got radically reduced.

Main text:

Hilton Budapest is located in the impressive Castle District, a World Heritage Site, next to the Fisherman's Bastion and Matthias Church. One of the finest luxury hotels of the city is known among its guests and catering professionals for the alloy of its exclusive surroundings and sophisticated style. The modern hotel interior blends with the elements of the former 13th century Dominican monastery in the building, also the hotel's 298 luxuriously decorated guest rooms and 23 suits have a unique panoramic view on the Danube curving at the foot of the mountains.

"Our task was to emphasize the luxury hotel's unique features to the maximum by choosing the suitable lighting"

The designer was responsible for creating an elegant subdued lighting, that is most suitable to the five-star, luxurious, baroque environment, and emphasizes the hotel's unique features to the maximum. Therefore, a light source, perfectly able to recreate the warm atmosphere of traditional bulbs was necessary. The choice fell on the ToLEDo Retro LED product line from Feilo Sylvania.

"A light source, perfectly able to recreate the warm atmosphere of traditional bulbs was necessary"

The products are made with the ToLEDo Retro LED fibre technology that consists of 1.5 mm wide and, depending on the model, 3-4 cm long LED fibres, each with 1-1.5 watts, which provide the light. Thanks to the technology the light sources emit light in all directions. The A++ energy class LED light sources, which are available in GLS, Ball, Candle and special versions, are practically applicable in any surroundings.

The members of the product family are the perfect energy saving alternatives to general and decorative lighting, wall lamps, table lamps and chandeliers.

Feilo Sylvania's high quality and energy efficient light sources, which can be customized to any local or individual needs, succeeded in making the impressive environment of the Hilton Budapest building more unique.
