

HAVELLS SYLVANIA GEARS UP TO SUCCESS WITH AUTOGRAPHE SA

Specialised car fit-out company, Autographe SA has recently upgraded the lighting at its 26,000m² factory in Wavre, Belgium and installed a combination of Sylvania's energy efficient Fast Trunking System (FTS) and Sylproof waterproof luminaires. The new lighting scheme is reducing running costs for the company as well as ensuring they have optimum light levels for their detailed and skilled work.

The company has been fitting-out commercial and emergency vehicles such as police cars, ambulances and fire trucks since 1975 and is the market leader in Belgium. It is primarily a family business, where staff welfare and comfort is a top priority. The management, today comprising Bernard de Saint Hubert and his two sons, Mathieu and Renaud,

is convinced that the basis of the company's success is linked to the professionalism and attention to detail of the staff. For over 40 years, Autographe has been run on two key principles: flexibility and professionalism. From single vehicles right through to mass production, Autographe delivers more than 1200 vehicles a year.

Autographe's services require a high level of attention to detail including the layout and lettering on the vehicles which requires high light levels. The new lighting scheme required light levels of a minimum of 750lx to guarantee the quality of the work in the production hall. An additional requirement was that the luminaires had to be suspended and using cool white light in order for employees to correctly carry out the precision work.

KEY FACTS

Application: Factory

Location: Belgium

Lighting designer: Havells Sylvania

KEY OUTCOMES

- Reduced running costs for lighting system
- Increased light output and even distribution
- High quality light for staff comfort and performance

These exacting performance requirements were ably met with the combination of luminaires from the Sylvania Range from Havells Sylvania. The Sylvania FTS was specified supplemented with Sylproof Superia LED waterproof luminaires on the walls. In total, 636 FTS modules were suspended in the hall and 22 Sylproof Superia LED waterproof luminaires were installed by electrical engineer, Nizet SA.

The FTS is a fast-fit, T5 fluorescent lighting system that is ideal for large, open space applications such as retail superstores and warehouses. The luminaires can be

surface-mounted or suspended with single or double T5 lamps (35W, 49W and 80W) with a wide choice of reflectors available for maximum output flexibility. The system's modular components combine to create a complete, linear lighting system. The main module comes in two lengths – 1500 or 3000mm – with 'T' 'L' and 'X' connectors and end caps adding to the system's design flexibility. Each pre-wired module is DALI compatible with electrical connection via a fast-connect system. Plug-and-play internal electrical connectors and the quick mechanical connection system ensure fast, reliable and flexible installation.

The new lighting scheme is reducing running costs for the company as well as ensuring optimum light levels for their detailed and skilled work
